

**Only ScootaTrailer...**

- can be pulled behind any compact or sub-compact car\*
- is safe at highway speeds
- protects your scooter or power chair from rain, snow and road dirt
- requires no bending or lifting to load
- secures and shelters your scooter or chair

\*Requires only a class 1 trailer hitch.

To whom it may concern,

Any vehicle that a hitch is made for is enough vehicle & enough hitch. It doesn't matter what class hitch it is, and it doesn't matter what vehicle it is. The Toyota Camry, Ford Focus, Honda Civic, VW Beetle, etc. etc. and yes, the 'Smart Car', can all tow the large or small trailer with up to a 600 lb. power chair or scooter inside. AND, they can all do it at any highway speed without complication of overloading the vehicle or the hitch.

Most of the vehicles I just named can only have a 100 lb. – 1,000 lb. rated hitch installed. STILL enough for either trailer with ANY chair or scooter.

But, of course, we do have SUV's and mini-vans towing them as well.

The only thing you need to consider is whether you need the small or the large trailer. **Small model inside:** 29 ½" x 60" (the aluminum top can be ordered with 40" or 46" vertical clearance) **Large model inside:** 37 ½" x 66" (the aluminum top can be ordered with 46" or 52" vertical clearance)

Sincerely,

Greg Tesh
